RAZORPAY × ISB BUILD CHALLENGE · TRACK 1: RAZORPAY IN YOUR POCKET

Proof Ready

Contest a payment dispute from your phone in under 2 minutes

For: small online sellers (Instagram sellers, home businesses, small D2C brands) who take card payments through Razorpay payment links and run the business from their phone.

Product note

3 working days	Automatic loss	Website only	On the phone
to respond to a dispute	if the seller misses the deadline	no disputes in the phone app	where the proof already is

THE PROBLEM

A customer asks their bank to reverse a payment, saying the item never arrived. This is a **dispute** (chargeback). Today:

- Razorpay **holds the disputed amount** from the seller's balance right away.
- The seller is told by email and has **3 working days** to send proof, or **loses automatically**.
- Disputes can only be handled on the website. The app has payments, links, refunds and settlements, not disputes.
- Each reason needs different proof, listed in a guide most sellers never read.
- The outcome is hidden too: a payment only shows Captured or Failed.

Workaround: screenshot the slip and chat, email them to yourself, open a laptop, find the dispute, guess the documents. One seller lost ₹38,838 to one dispute; another had ₹1.5 lakh stuck despite having proof (Trustpilot, 2026).

Why mobile: the alert, the proof and the seller are all on the phone. Only the laptop is in the way.

Why it matters to Razorpay: fewer support tickets (the loudest complaint in reviews), fewer lost chargebacks, and small sellers who keep trusting card payments instead of switching gateways.

THE SOLUTION

Save proof when the order ships, so a dispute becomes a quick review, not a hunt.

1 When the order ships — 5 seconds

On card payments above an amount the seller sets: **"Shipped? Add proof."** Snap the courier slip and parcel, or share the chat. Saved against that payment.

2 When a dispute is raised — under 2 minutes

1. Alert: "₹1,400 on hold for a dispute. Respond by Fri, 16 Oct."
2. Amount, countdown, reason in plain words, status Open → Under review → Won / Lost
3. Checklist of the proof that wins *this* reason, pre-filled from step 1, gaps flagged. Tick the photos of the disputed item; contest all or part.
4. Explanation, review, submit. Or **Accept dispute** if the customer is right.

3 When the bank decides — 15 to 30 days later

Alert, then a **Final decision** card on Home until the seller taps "Got it". The payment keeps a "Final" line; a Disputes tab under Payments holds every case.

HOW I FOUND THIS PROBLEM

01 Mapped website vs app
Compared the website and the phone app using Razorpay's docs. Disputes, instant settlements and held payments all need the website or support.

02 Read what merchants say
Recent Play Store, App Store and Trustpilot reviews. Held money, lost disputes, KYC and slow support kept coming up.

03 Scored 5 options
Money at stake? Away from a desk? Recurs? Doable in 2 min? Clear workaround? Disputes fit best. Settle Now is a convenience; held payments depend on Razorpay's review.

04 Checked every fact
Researched with Claude and Gemini, then verified each number in Razorpay's docs. Caught AI errors, e.g. a ₹3,000 "penalty" that is really an arbitration fee.

KEY DECISIONS

- **Proof at shipping, not after:** easiest to get then; 3 days is no time to hunt.
- **Inside the app sellers already use:** a Disputes tab and a Home alert.
- **A checklist per dispute type,** with a warning when WhatsApp proof is weak.
- **Show the outcome where sellers look:** on the payment and on Home.
- **Built on Razorpay's own dispute rules:** statuses, evidence types, partial contest.
- **Accept is an equal option:** a fair claim isn't worth fighting.

Risks and how I'd handle them

Private chats: owners and admins only; deleted if no dispute comes.
Wrong or blurry proof: flagged before submitting.
Prompt fatigue: only above the seller's amount; one tap to skip.

HOW I WOULD MEASURE SUCCESS

METRIC	WHY IT MATTERS
Main: disputes answered on time	Missed = automatic loss
Win rate on contested disputes	Better proof
Alert to submit, goal under 2 min	Phone flow works
Card payments with proof saved early	Shipping step is used
Check: evidence rejected	Speed doesn't cost quality

Validate with 5 to 10 sellers: unanswered disputes today, proof already on the phone, prompt helpful or annoying. **Next:** auto-read tracking from the slip photo.

Not built on purpose: later dispute stages, fraud disputes, bulk handling, auto-written explanations, Settle Now.

Sources: Razorpay Docs (Disputes, Chargeback Fees, Submit Evidence, Dispute API, Mobile App, Payment States); Trustpilot merchant reviews. Segment, flow and prototype data are my assumptions.
